***W3 - Lesson 2:
2-D Shapes and
3-D Objects***

OBJECTIVES

By the end of this lesson, you should

- understand the geometric figures in a *tangram*
- classify triangles
- identify and name polygons
- draw and build 3-D shapes

Glossary of Terms

Cube:

a figure with 6 equal square faces – 3D object (sugar cube)

Edge:

the line segment where 2 faces of a solid figure meet

Equilateral triangle: a triangle that has 3 equal sides

Face:

a flat surface in a solid figure

Hexagon:

a polygon with 6 sides and only 1 line of symmetry

Isosceles triangle:

a triangle with 2 equal sides

Kite:

a polygon with 4 sides – 2 pairs of equal adjacent sides

Octagon:

a polygon with 8 sides

Parallelogram:

a quadrilateral with 2 sets of parallel sides

Pentagon:

a polygon with 5 sides

Polygon:

a closed 2D shape with only straight sides (It can have many sides.)

Quadrilateral:

a polygon with 4 sides

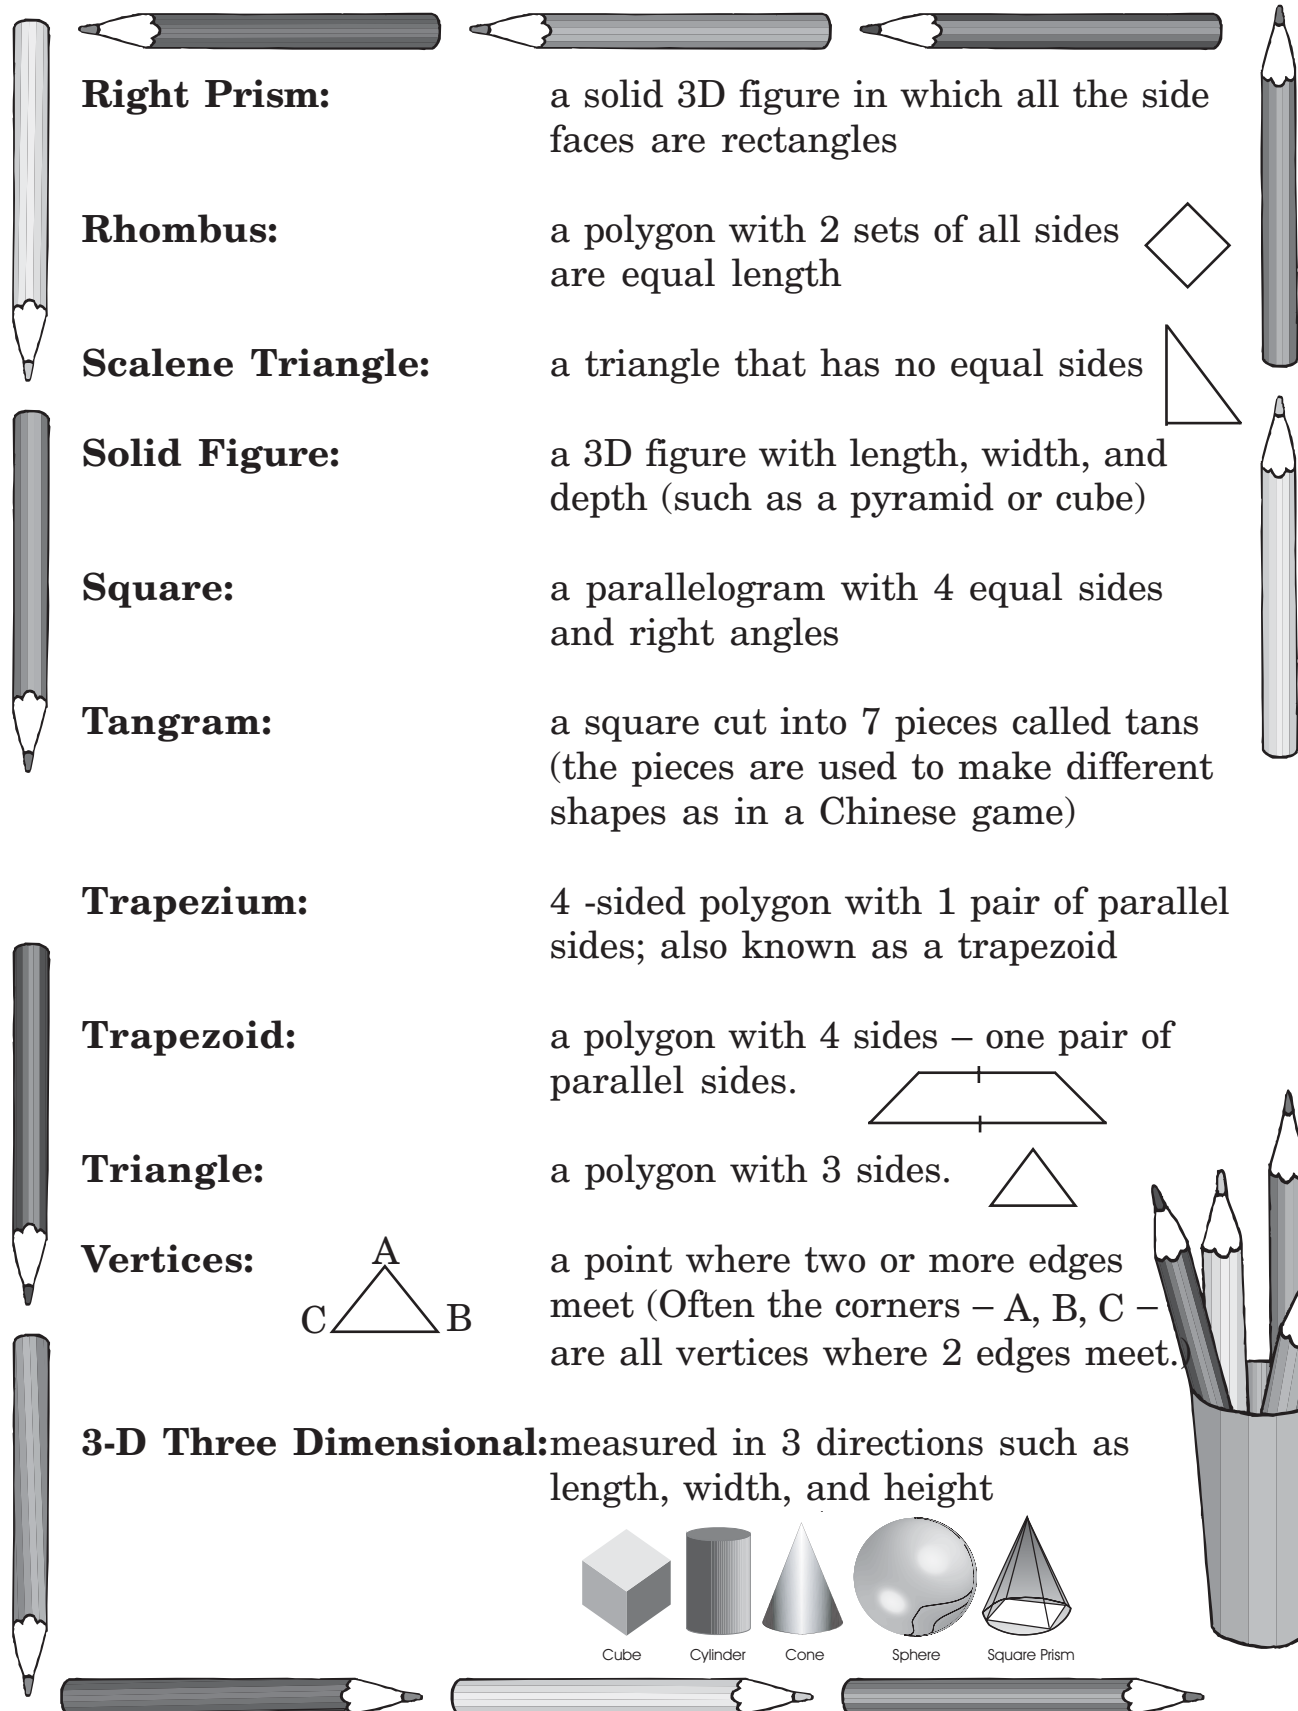

Rectangle:

a polygon with 4 sides – 2 sets of equal opposite sides meeting at right angles

Regular Polygon:

a polygon with equal sides and equal angles

Right Prism: a solid 3D figure in which all the side faces are rectangles

Rhombus: a polygon with 2 sets of all sides are equal length 

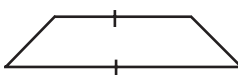

Scalene Triangle: a triangle that has no equal sides 

Solid Figure: a 3D figure with length, width, and depth (such as a pyramid or cube)

Square: a parallelogram with 4 equal sides and right angles

Tangram: a square cut into 7 pieces called tans (the pieces are used to make different shapes as in a Chinese game)

Trapezium: 4 -sided polygon with 1 pair of parallel sides; also known as a trapezoid

Trapezoid: a polygon with 4 sides – one pair of parallel sides. 

Triangle: a polygon with 3 sides. 

Vertices:  a point where two or more edges meet (Often the corners – A, B, C – are all vertices where 2 edges meet.)

3-D Three Dimensional: measured in 3 directions such as length, width, and height

Cube Cylinder Cone Sphere Square Prism

W3 - Lesson 2: 2-D Shapes and 3-D Objects

Concepts:

- Tangrams
- Classifying Triangles
- Identify and Name Polygons
- Draw 3-D Shapes
- Build 3-D Shapes

Tangrams

A **tangram** is a square cut into 7 pieces called tans: 1 parallelogram, 1 square, 1 medium triangle, 2 small triangles, and 2 larger triangles. The pieces are used to make different pictures. (*Tan* means pieces, and *grams* means picture.) Tangrams were invented as a game over 250 years ago by the Chinese.

Using the tangram on the next page of the lesson, try to make the following pictures.

Tangram Pattern

Cut out these shapes and make the pictures on the previous page. If you have a friend also working on this lesson, make a game of it and see who can create each tangram in the fastest time.

Classifying Triangles

Triangle: a polygon with 3 sides

- **Equilateral triangle:** a triangle with 3 equal sides
- **Isosceles triangle:** a triangle with 2 equal sides
- **Scalene triangle:** a triangle with no equal sides

Polygon: a closed 2D shape with only straight sides (It can have three or more sides.)

Regular polygon: a polygon with equal sides and equal angles

1. Slashes have been used to show equal sides. What are four ways we can classify this triangle? Choose from the list above.

2. What are three ways we can classify this triangle?

4. Draw a scalene triangle.

	Number of Equal Sides	Number of Equal Angles
Equilateral triangle		
Isosceles triangle		
Scalene triangle	0	0

Identify and Name Polygons

Polygons are two-dimensional shapes with straight sides. The prefix of each polygon tells how many sides the shape has. Keep in mind that some polygons can have several looks. For example, a square can become a rhombus if the angles are changed.

Use the glossary to help you fill in the chart below.

	Number of Sides	Are all the Sides the Same Length	Number of Angles	Number of Vertices
triangle	3			
quadrilateral	4			
pentagon	5			
hexagon				
octagon				
kite				
parallelogram				
rectangle				
rhombus				
square				
Trapezium				
Trapezoid				

Draw 3-D Shapes

Drawing 3-D shapes is easier with graph or dot paper. Copy the shapes below exactly. Then try enlarging or reducing a favourite shape. Try a different 3-D shape.

Build 3-D Shapes

Complete the questions below.

Label this cube with the appropriate terms listed along the side. Draw an arrow to the correct part of the cube.

Give 5 examples of sphere-shaped items.

Name the one common solid shape for these items.

Pop can	
Container of Pringles chips	
A section of pipe	
A funnel	
Prism	

Draw a triangular pyramid.

On a cylinder,

How many vertices? _____

How many edges? _____

How many faces? _____

How many curved edges? _____

How many curved surfaces? _____

On a triangular prism,

How many vertices? _____

How many edges? _____

How many faces? _____

How many curved edges? _____

How many curved surfaces? _____

Build 3D Shapes-Patterns

Please note: some pieces overlap.

Cut out the two shapes below to build 3-D objects.
