W1 – Lesson 5:

Working with Percents

OBJECTIVES

By the end of this lesson, you will be able to:

- Determine the percent represented by a grid
- Represent a percent greater than 100 using grid paper
- Convert percents into decimals and fractions
- Convert decimals into percents and fractions
- Convert fractions into percents and decimals
- Solve problems involving percents

GLOSSARY

Percent – a given part for every hundred; for example, 25% means 25 for every 100.

W1 – Lesson 5: Working with Percents

Materials required:

- Paper, Pencil, Calculator, and Grid Paper

Part 1: Representing Percents Greater than 100%

The word percent can be broken down into per-cent which literally means “per hundred.” A percent is used to represent a given part for every hundred and uses a % symbol to indicate that the number is a percent. On your last math test, you may have received a mark of 75%. This means that if 100 questions were written, you would have gotten 75 of them correct. You are used to seeing percents between 0-100, but it is possible to have a percent that is greater than 100.

If you own a business, you will likely increase the price of a product that you purchased in order to make a profit. If you double the price of the product you are marking up the price by 100%.

For example, if you buy a chair for \$75 and sell it for \$150, then you are adding 100% of the cost of the original product to itself and you make \$75 in profits. 75 is 100% of 75, so you have made a 100% profit. Similarly, if you sold the chair for \$225, the mark up in price is \$150. \$150 is 200% of 75, so you have made a 200% profit.

Another example is the work of a photographer. If you go to a portrait studio and ask for a picture to be enlarged, they have the ability to increase it by 150%. This means the picture you receive will be 1 and a half or 1.5 times as large as the original picture you gave them to enlarge.

Percents can be represented using a grid paper with one hundred squares. Each square that is shaded in represents 1%.

In this example, the completely shaded in grid represents 100%. The partially shaded in grid represents $35\frac{1}{2}\%$.

In total $135\frac{1}{2}\%$ is represented by using the grid paper.

Practice Questions

1. Represent the given diagram as a percent, as a decimal number, and in fraction form.

Percentage = 268.5%

Decimal = 2.685

Fraction = $\frac{2685}{1000} = 2\frac{137}{200}$

2. Represent 146% using the following grids.

Answer:

3. Represent 121.5% using the following grids.

Answer:

Part 2: Relating Percents, Decimals, and Fractions

A percent can also be expressed as a decimal number and in fraction form.

- To express a percent as a decimal, remove the percent symbol, and move the decimal point in the percentage two places to the left.

$$48\% = \underbrace{48}_{\text{move decimal 2 places left}} = 0.48$$

- To express a percent as a fraction, place the percent over 100 and drop the percent symbol. Then simplify the resulting fraction.

$$148\% = \frac{148}{100} = \frac{148 \div 4}{100 \div 4} = \frac{37}{25} = 1\frac{12}{25}$$

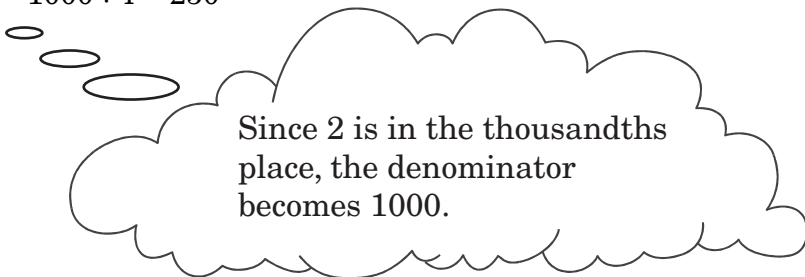

A decimal can also be expressed as a percent and in fraction form.

- To express a decimal as a percent, move the decimal point two places to the right and add a percent symbol at the end of the number.

$$0.572 = \underbrace{0.572}_{\text{move decimal 2 places right}} = 57.2\%$$

- To express a decimal as a fraction, place the decimal number over a denominator that is equal to the last place value in the decimal number and remove the decimal point. Then simplify the resulting fraction.

$$0.572 = \frac{572}{1000} = \frac{572 \div 4}{1000 \div 4} = \frac{143}{250}$$

Since 2 is in the thousandths place, the denominator becomes 1000.

A fraction can also be expressed as a percent and as a decimal number.

- To express a fraction as a decimal, divide the numerator by the denominator.

$$\frac{5}{8} = 5 \div 8 = 0.625$$

Mixed numbers can also be expressed as decimals by applying the same rules.

$$2\frac{4}{5} = 2 + (4 \div 5) = 2 + 0.80 = 2.80$$

- To express a fraction as a percent, divide the numerator by the denominator, and move the decimal point two places to the right. Then add a percent symbol behind the resulting number.

$$\frac{5}{8} = 5 \div 8 = 0.625 = 62.5\%$$

Mixed numbers can also be expressed as percentages by applying the same rules.

$$2\frac{4}{5} = 2 + (4 \div 5) = 2 + 0.80 = 2.80 = 280\%$$

Practice Questions

- Express the following percents as a decimal number and in fraction form.

- 382%

$$382\% = 3.82 = \frac{382}{100} = 3\frac{41}{50}$$

- 166%

$$166\% = 1.66 = \frac{166}{100} = 1\frac{33}{50}$$

2. Express the following decimals as a percent and in fraction form.

a. 1.18

$$1.18 = 118\% = \frac{118}{100} = 1\frac{9}{50}$$

b. 2.05

$$2.05 = 205\% = \frac{205}{100} = 2\frac{1}{20}$$

3. Express the following fractions as a decimal number and a percent.

a. $3\frac{7}{10}$

$$3\frac{7}{10} = 3 + (7 \div 10) = 3 + 0.70 = 3.70 = 370\%$$

b. $\frac{12}{5}$

$$\frac{12}{5} = 12 \div 5 = 2.4 = 240\%$$

Part 3: Problem Solving with Percents

To solve problems involving percents, you must convert the percent into a decimal first. Then it is possible to complete the calculations.

Example 1

A clothing store is discounting all its out-of-season stock for 15% off the sale price. Isaiah wants to buy a jacket that is on sale for 20% off its original price. If the original price of the jacket is \$129.98, how much will it cost Isaiah to purchase the jacket before taxes?

Answer:

Step 1: Calculate the sale price after applying the 20% discount.
Convert 20% into a decimal and then complete the calculation.

$$20\% \text{ of } \$129.98 = 0.20 \times 129.98 = 25.996 \approx 26.00$$

Subtract the amount of the first discount from the original price of the jacket.

$$129.98 - 26 = \$103.98$$

Step 2: Calculate the final price after applying the 15% discount.
Convert 15% into a decimal and then complete the calculation.

$$15\% \text{ of } \$103.98 = 0.15 \times 103.98 = 15.597 \approx 15.60$$

Subtract the amount of the second discount from the sale price of the jacket.

$$\$103.98 - 15.60 = \$88.38$$

Isaiah will pay \$88.38 for the jacket.

Example 2

Megan lives in Victoria and wants to buy a new pair of shoes that cost \$59.99. How much will the shoes cost in total, including GST & PST? (The PST in British Columbia is 7%).

Answer:

Step 1: Calculate the amount of the GST.

Convert the GST into a decimal and complete the calculation.

$$5\% \text{ of } \$59.99 = 0.05 \times 59.99 = 2.9995 \approx 3.00$$

Step 2: Calculate the amount of the PST.

Convert the PST into a decimal and complete the calculation.

$$7\% \text{ of } \$59.99 = 0.07 \times 59.99 = 4.1993 \approx 4.20$$

Step 3: Calculate the total cost of the shoes.

Add the GST and the PST to the original price of the shoes.

$$\$59.99 + 3.00 + \$4.20 = \$67.19$$

Alternate solution:

Because the taxes are being taken off the same amount, they can be added together and the final price can be calculated in a fewer number of steps.

Step 1: Add the GST & PST together.

$$5\% + 7\% = 12\%$$

Step 2: Calculate the total cost of the shoes.

Convert the total taxes into a decimal and complete the calculation.

$$12\% \text{ of } \$59.99 = 0.12 \times 59.99 = 7.1988 \approx 7.20$$

Add the amount of the taxes to the original price of the shoes.

$$59.99 + 7.20 = \$67.19$$

Megan will pay \$67.19 for the new pair of shoes.

Practice Questions

1. An MP3 player in Regina costs \$19.99 and is discounted by 25%. What is the total cost of the MP3 player including all appropriate taxes? (The PST in Saskatchewan is 6%).

Step 1: Calculate the sale price of the MP3 player.

Convert 25% into a decimal and then complete the calculation.

$$25\% \text{ of } \$19.99 = 0.25 \times 19.99 = 4.9975 \approx 5.00$$

Subtract the amount of the discount from the original price.

$$19.99 - 5.00 = \$14.99$$

Step 2: Calculate the amount of the GST.

Convert the GST into a decimal and complete the calculation.

$$5\% \text{ of } \$14.99 = 0.05 \times 14.99 = 0.7495 \approx 0.75$$

Step 3: Calculate the amount of the PST.

Convert the PST into a decimal and complete the calculation.

$$6\% \text{ of } \$14.99 = 0.06 \times 14.99 = 0.8994 \approx 0.90$$

Step 4: Calculate the total cost of the MP3 player.

Add the GST and the PST to the sale price of the MP3 player.

$$14.99 + \$0.75 + \$0.90 = \$16.64$$

In Regina, the MP3 player will cost \$16.64.

2. One summer, Chloe counted 320 ducks in a lake. The following summer Chloe noticed that only 80% of the ducks returned. How many ducks returned that following summer?

Convert 80% into a decimal and then complete the calculation.

$$80\% \text{ of } 320 = 0.80 \times 320 = 256$$

That following summer, only 256 ducks returned to the lake.

Lesson 5: Assignment

1. Determine the number represented by the following grid. Express the answer as a percent, a decimal number and in fraction form.

There are 163.5 squares shaded.

As a percent, this is expressed as 163.5%.

As a decimal, it is expressed as 1.635.

As a fraction form, it is expressed as $1\frac{127}{200}$.

2. Express the following percents as decimal numbers and in fraction form.

- a. 121%

$$121\% = 1.21 = \frac{121}{100} = 1\frac{21}{100}$$

- b. 34%

$$34\% = 0.34 = \frac{34}{100} = \frac{17}{50}$$

- c. 279%

$$279\% = 2.79 = \frac{279}{100} = 2\frac{79}{100}$$

3. Express the following decimals as percents and in fraction form.

a. 1.56

$$1.56 = 156\% = \frac{156}{100} = 1\frac{14}{25}$$

b. 2.85

$$2.85 = 285\% = \frac{285}{100} = 2\frac{17}{20}$$

c. 5.42

$$5.42 = 542\% = \frac{542}{100} = 5\frac{21}{50}$$

4. Express the following fractions as decimal numbers and as percents.

a. $2\frac{5}{8}$

$$2\frac{5}{8} = \frac{21}{8} = 2.625 = 262.5\%$$

b. $\frac{18}{4}$

$$\frac{18}{4} = 4.5 = 450\%$$

c. $5\frac{3}{4}$

$$5\frac{3}{4} = \frac{23}{4} = 5.75 = 575\%$$

5. Emma had 44 shots on goal during hockey practice and scored 11 times. What percent of her shots were saved?

Calculate the number of shots saved.

$$44 - 11 = 33$$

Determine the percentage of shots saved.

$$\frac{33}{44} = 0.75$$

Express the answer as a percent.

$$0.75 = 75\%$$

75% of Emma's shots were saved.

6. There were 224 people in the movie theatre on Thursday night. Approximately 63% of them had popcorn. How many people in the theatre had popcorn that night?

Express the percent as a decimal and complete the calculation.

$$63\% \text{ of } 224 = 0.63 \times 224 = 141.12$$

Approximately 141 people had popcorn to snack on that night.

7. The original price of a DVD player is \$148.99 and it is on sale for 15% off. There is a further 10% discount taken off at the cash register. What is the cost of the DVD player before taxes?

***Step 1: Calculate the sale price after applying the 15% discount.
Convert 15% into a decimal and then complete the calculation.***

$$15\% \text{ of } \$148.99 = 0.15 \times 148.99 = 22.3485 \approx 22.35$$

Subtract the amount of the first discount from the original price of the DVD player.

$$148.99 - 22.35 = \$126.64$$

***Step 2: Calculate the final price after applying the 10% discount.
Convert 10% into a decimal and then complete the calculation.***

$$10\% \text{ of } 126.64 = 0.10 \times 126.64 = 12.664 \approx 12.66$$

Subtract the amount of the second discount from the sale price of the DVD player.

$$126.64 - 12.66 = \$113.98$$

The final price of the DVD player is \$113.98.

8. The price tag on a mountain bike in Ontario is \$114.00. What is the total cost of the bike including all applicable taxes? (The PST in Ontario is 8%).

Step 1: Calculate the amount of the GST.

Convert the GST into a decimal and complete the calculation.

$$5\% \text{ of } \$114.00 = 0.05 \times 114.00 = 5.70$$

Step 2: Calculate the amount of the PST.

Convert the PST into a decimal and complete the calculation.

$$8\% \text{ of } \$114.00 = 0.08 \times 114.00 = 9.12$$

Step 3: Calculate the total cost of the mountain bike.

Add the GST and the PST to the original price of the mountain bike.

$$\$114.00 + \$5.70 + \$9.12 = \$128.82$$

Alternate solution:

Because the taxes are being taken off the same amount, they can be added together and the final price can be calculated in a fewer number of steps.

Step 1: Add the GST & PST together.

$$5\% + 8\% = 13\%$$

Step 2: Calculate the total cost of the mountain bike.

Convert the total taxes into a decimal and complete the calculation.

$$13\% \text{ of } \$114.00 = 0.13 \times 114.00 = 14.82$$

Add the amount of the taxes to the original price of the mountain bike.

$$114.00 + 14.82 = \$128.82$$

The mountain bike will cost \$128.82 in Ontario.

9. What is the total cost of a leather jacket that costs \$399.00 and is on sale for 75% off, if it is purchased in Alberta? (There is no PST in Alberta).

***Step 1: Calculate the sale price of the leather jacket.
Convert 75% into a decimal and then complete the calculation.***

$$75\% \text{ of } \$399.00 = 0.75 \times 399.00 = 299.25$$

Subtract the amount of the discount from the original price.

$$399.00 - 299.25 = \$99.75$$

***Step 2: Calculate the amount of the GST.
Convert the GST into a decimal and complete the calculation.***

$$5\% \text{ of } \$99.75 = 0.05 \times 99.75 = 4.9875 \approx 4.99$$

***Step 3: Calculate the total cost of the leather jacket.
Add the GST to the sale price of the leather jacket.***

$$\$99.75 + \$4.99 = \$104.74$$

In Alberta, the leather jacket will cost \$104.74.

10. The population of MetroTown was 570 000. The next year, the population increased by 10%. In the following year after that, the population increased by another 12%. What is the population of MetroTown now?

***Step 1: Calculate the population after the first population increase.
Convert 10% into a decimal and then complete the calculation.***

$$10\% \text{ of } 570\,000 = 0.10 \times 570\,000 = 57\,000$$

Add the population increase to the original population.

$$570\,000 + 57\,000 = 627\,000$$

***Step 2: Calculate the population after the second population increase.
Convert 12% into a decimal and then complete the calculation.***

$$12\% \text{ of } 627\,000 = 0.12 \times 627\,000 = 75\,240$$

Add the second population increase to the previous year's population.

$$627\,000 + 75\,240 = 702\,240$$

The current population of MetroTown is 702 240.
